Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE Three MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 7/14/03, 10/15/03, 4/22/02

DETAILED ACTION

Election/Restrictions

1. Applicant's election with traverse of Group I comprising polyoxyalkylene diamine as the ultimate species of component (A) in Papers filed July 16, 2003 and October 15, 2003 is acknowledged. The traversal is on the ground(s) that the search for all groups would be coextensive. This is not found persuasive because contrary to applicants' belief, the search fields for the enumerated groups is not coextensive. Furthermore, applicants have not submitted evidence or identified such evidence now of record showing the species to be obvious variants or clearly admitted on the record that this is the case. In either instance, if the examiner finds one of the inventions anticipated by the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention..

The requirement is still deemed proper and is therefore made FINAL.

2. Claims 22-54 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected group, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in Papers filed July 16, 2003 and October 15, 2003.

Claim Rejections - 35 USC § 102/103

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 1711

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1-2~~6~~ are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over U.S. 4,585,566 (Wollenberg).

Wollenberg disclose carbamate-containing lubricating oil dispersants prepared by reaction of a nitrogen-containing dispersant having at least one primary or secondary amino group with a cyclic carbonate. The reaction is conducted at temperatures of from about 0 C to about 250 C and may be conducted in the presence of a catalyst. Mole ratios of the cyclic carbonate to the basic amine nitrogen are generally in the range of from about 0.2:1 to about 10:1. Suitable cyclic carbonates embraced the same type preferred by applicants, e.g., ethylene carbonate. Suitable nitrogen-containing dispersants include polyoxyalkylene polyamines as presently claimed.

The disclosure of the reference meets the requirements of the present claims both in terms of the types of materials added and their contents. The onus is shifted to applicants to establish that the product of the present claims are not the same as or obvious from those set forth by the reference.
